

CommCare Sync Data

You can use a special URL to view what data will be sent to the phone when it syncs with CommCare HQ.

- View restore data for any mobile user in HQ.
 - View all data associated with a user: http://www.commcarehq.org/a/{my-project-space}/admin_restore/?as={user}@{domain}.commcarehq.org&version=2.0
 - App Specific: http://www.commcarehq.org/a/{my-project-space}/admin_restore/{app_id}/?as={user}@{domain}.commcarehq.org&version=2.0 (assumes current state of the app, not particular build)
 - Build Specific: http://www.commcarehq.org/a/{my-project-space}/admin_restore/{build_id}/?as={user}@{domain}.commcarehq.org&version=2.0
- Additional params:
 - since={previous restore id}
 - Incremental response since the previous sync.
 - items=true
 - Include the item number in the response.
 - overwrite_cache=true
 - Don't return a cached value but rather recompute the response. Deletes the cache, so the next time you sync on the phone, it will use the newly computed result.
 - raw=true
 - Raw restore response without the UI
 - device_id={device_id}
 - Fake a restore from a particular device id. WebApps uses a device ID of the form "WebAppsLogin".
 - app_id={app_id}
 - Restore using app aware sync. This will only sync down the reports for that particular application.
 - case_sync={clean_owners | livequery}
 - Select which case sync algorithm to use with this restore
 - hide_xml=true
 - Shows only aggregate case counts, without loading associated XML data
