

Budgeting for a Project

CommCare Total Cost of Ownership (TCO) Model

Budgeting is one of the most important considerations for any mobile project. Building a holistic picture of all the related costs associated with a mobile project takes time. To help organizations estimate the total cost of adopting CommCare (or other mobile technologies) for frontline programs, we have developed an easy-to-use budgeting tool called the [Total Cost of Ownership Model](#).

The TCO Model serves as a simple, transparent exercise for organizations interested in understanding the cost of maintaining a mobile solution. The tool provides a model to budget the adoption and deployment of CommCare over five years, and is based on 10+ years of experience helping hundreds of partners determine their budgets.

The TCO Model helps organizations:

- Estimate the total cost of adopting CommCare or other mobile technologies
- Explore permutations and plan budgets accordingly
- Help groups understand and/or identify the real cost drivers to maintaining a mobile system
- Assess how these costs can be shared by governments, external donors, NGOs, or others

For additional context, please reference [this blog post](#). Or please feel free to [contact us](#) with any questions on the TCO Model or your proposed project.

CommCare Pricing
