

Automatically Close Cases

This feature requires a CommCare Software Plan

This feature (Automatically Close Cases) is only available to CommCare users with a **Pro Plan** or higher. For more details, see the [CommCare Software Plan page](#).

Overview

This feature allows users with Edit Data access (see [CommCareHQ Web Users](#)) to configure updates to cases, including the ability to close cases. Without this feature the only ways to close cases are by filling out a form which closes a case, finding the case in the Case List and manually using the Close Case button, or by using the [Importing Cases Using Excel](#) tool.

Here are some examples of when this is useful:

- Automatically closing and removing stale cases from users phones
- Regularly closing cases that have a specified combination of case properties (for example, a case updated by two apps where both users' protocols are completed)

Cases are closed by creating **rules**.

The basic process of defining a rule is:

1. Define all of the criteria for the cases you want to match.
2. Choose all of the actions to apply to the cases that match the criteria.

Rule List

Navigating to Data -> Automatically Close Cases you will see a list of all rules for the project along with the last time the rule has run to completion. If "Last Run" is not updated, it means that the rule has not yet run or did not run to completion on its last run. The completion could not have succeeded due to exceeding of the maximum number of automatic updates per day (10,000), due to exceeding the max run time (24 hours), or that there was an error during the run.

Automatic Case Close Rules				
Name	Case Type	Status	Last Run	Action
Close when parent closed	person	Active	-	<button>Deactivate</button> <button>Delete</button>

Rules

Creating a New Rule

You can create a rule by navigating to Data -> Automatically Close Cases:

The screenshot shows the CommCareHQ interface. At the top, there is a navigation bar with 'Dashboard', 'Reports', 'Data' (highlighted with a red box), 'Users', 'Applications', and 'CloudCare'. Below the navigation bar, the breadcrumb 'Data > Automatically Close Cases' is visible. On the left side, there is a sidebar menu with sections: 'EXPORT DATA' (containing 'Export Forms' and 'Export Cases'), 'EDIT DATA' (containing 'Reassign Cases', 'Import Cases from Excel', 'Manage Forms', and 'Automatically Close Cases' which is highlighted with a red box), and 'LOOKUP TABLES' (containing 'Manage Tables' and 'View Tables'). In the main content area, there is a green button '+ Add Automatic Case Close Rule' with a hand cursor over it. Below the button is the heading 'Automatically update and close cases from CommCareHQ' and a paragraph: 'This allows you to define rules that will update or close cases from CommCareHQ. These rules changes, use the "Manage Forms" page.' Below this is a section titled 'Automatic Case Close Rules' containing a light blue box with the text: 'There are currently no automatic update rules in this project.'

For example, imagine that you want to close any "person" cases which have not been updated in a year. You want to do this to reduce the case load on the users' phones and to keep the reports accurate.

The first step is to click on **Add Automatic Close Rule** and fill out the basic information by giving the rule a name you can use to remember what it's for:

The screenshot shows the 'Basic Information' section of the form. It has a title 'Basic Information' and a single input field labeled 'Name*' with the text 'Remove Stale Cases' entered.

Next, add your filter criteria which define the cases that the rule will apply to. The criteria pictured below say to match all cases with case type "person" that have not been modified in 365 days:

The screenshot shows the 'Case Filters' section. It starts with an information icon and the text: 'The Actions will be performed for all open cases that match all filter criteria below.' Below this, there is a dropdown menu for 'Case Type*' with 'person' selected. Underneath, there is a filter rule: 'AND Case not modified in 365 days'. There is a red 'x' icon to the left of 'AND'. At the bottom, there is a green '+ Add filter for' button and a dropdown menu with the text '(Select one and click Add filter)'.

And lastly, specify the actions that will be applied to the cases that match these criteria. These actions say to close the case and update case property "close_reason", setting it to the value "automatic".

Case Filter Criteria

The following filter criteria are available for matching cases:

- **Case Type** - is always a required part of the criteria. Select the case type of the cases you want to update or close, and if you want to match more than one case type you will need to create a rule for each case type.
- **Case Not Modified Since** - specify the number of days elapsed since the date the case was last modified. This last modified date is based on the time the last form to update the case was received (server time).
- **Case Property** - this filter allows you to match case property equality, inequality, or that a case property has a value.
- **Date Case Property** - this filter allows you to match when the current date comes after or before a date in a case property.
- **Date Case Property (advanced)** - this filter is similar to the Date Case Property filter, only it lets you add or subtract an offset to the value in the date case property before comparing to the current date.
- **Parent Case is Closed** - this filter lets you match cases whose parent case is closed.

NB: It is possible to reference parent/master case properties in any of the case property filters. The syntax follows the convention of "parent /<case_property>" or "host/<case_property>". Possible use case: Close the growth monitoring case when the parent (i.e person case) turns 6.5 years old.

Actions

The following actions can be performed on cases which match the filter criteria:

- **Close the case** - when this action is chosen, all cases which match the filter criteria will be closed.
- **Update case property** - you can choose to update a case property with or without closing the case. If you are closing the case, this may be useful if you want to specify why the case was closed for future data analysis. If you choose to update a case property you also have the option of setting it to either an exact value or setting it to the value from another case property.

Running a Rule

Rules run automatically every day at Midnight GMT. You cannot choose when a rule is run.

Managing Rules

You can update, delete, or deactivate a rule at anytime from the list of rules.

Case References

In addition to the dynamic case properties created by your app(s), you can reference the following case properties in automatic update rule criteria:

Case Property	Description
name	The case's name
owner_id	The system identifier for the case's owner
opened_on	The timestamp that the case was opened
opened_by	The system identifier for the case's opener
modified_on	The timestamp that the case was last modified on mobile
server_modified_on	The timestamp that the case was last modified on the server
external_id	An optional external id your app may assign to the case

Parent cases may also be referenced in the automatic update rule criteria by prefixing the property name with "parent/". So, for example, parent/name references the parent case's name.

Reporting and Case Actions

The case close action shows up the case history as a form submission. You can view the form that closed the case by looking in the Submit History report or the Manage Forms tool. The form will also show up in the Case History of any cases closed by a rule. In the case history for the form name will show up as "Unknown" and the user as "system":

Received (EST)	Form	User
2015-12-15 13:47	unknown	system >
2015-3-24 11:41	Form	324bug >

1-2 / 2 10 / page

Reversing a Rule

If a rule ran and closed cases and you want to undo that action, you should go to **Manage Forms** or **Submit History** report, locate the form submission that closed the cases, and archive it. This will restore the case to its prior status. For more information on archiving forms, please see [Archive Forms](#).

To find the forms you will want to use the following filters:

Report Filters

Groups or Users

Filter Forms Known Forms ?
 Unknown Forms (Possibly Deleted) ?

Show Advanced Options

Filter Dates By Completion time is when the form is completed on the phone. Submission time is when CommCare HQ receives the form.

Date Range This report's timezone is America/New_York.

Archived/Restored ?

You can add the filter options in the following order:

1. Choose Unknown Users
2. Select Advanced Options
3. Select Unknown Forms
4. Choose Unknown Form Name "http://commcarehq.org/hq_case_update_rule"
